

1. What goal will your website be designed to achieve?
 - a. The website will be designed in a manner that allows the customer to feel a safe space to document the events of their day and their feelings about those events. It should also help them feel that information is private and it is just them and their emotions at the time of documentation. The site should also be used to serve as a method to bypass writers block or artist block and just document the rushing thoughts, through a feature provided called quick jots.
2. What kind of users will visit your site? In other words, what is the demographic of your users?
 - a. The site is open to all users or all ages.
3. What data do you plan on using? You may have not picked your actual API yet, which is fine, just outline what kind of data you would like it to contain.
 - a. The API selected for the project is a quote of the day API that will be used to display a different quote each day. The quotes should help introduce new emotion each time the site is accessed for quick jot or continuation of a journal.
4. In brief, outline your approach to creating your project (knowing that you may not know everything in advance and that these details might change later). Answer questions like the ones below, but feel free to add more information:
 - a. What does your database schema look like?
 - i. Table 1: id, user_id, password
 - ii. Table 2: journal, journal date
 - iii. Table 3: test_entry, test_date
 - b. What kinds of issues might you run into with your API?
 - i. The API could become discontinued, or the quote may not be relevant to the emotions of the individual.
 - c. Is there any sensitive information you need to secure?
 - i. The password, and test_results will need to be secured.
 - d. What functionality will your app include?
 - i. The application will allow the user to document their feelings and bring attention to self-help and allow those who may not suffer from mental health an outlet for expression.
 - e. What will the user flow look like?
 - i. The user will receive a welcome page with the quote of the day.
 - ii. The user will be presented three options
 1. Quick jot
 2. Begin Journal
 3. Returning Journalist
 - f. What features make your site more than CRUD? Do you have any stretch goals?
 - i. While at the base the application may be CRUD. The application is designed to be simple, but heightens emotion for the user experience due to its simplicity. The user should not feel with this application that it is too complicated to use.
 - ii. Stretch goals for the application would be using the PHQ-9 results to generate a list of therapist or tele-mental health options available to the

user should they have a severe rating on the test. Another stretch goal would be to have an option for focus groups based on what an individual is going through at the time of their life.
